Final report feedback

Title: Lightweight approaches for removing facial makeup with GANs
Team Members: Gengrui Zhang and Hanwen Liang
Final Mark: 92 (A+)

Marks

- **Abstract: 5/5**

- **Introduction: 9/10**

  What's the motivation for using the StarGAN? If I understand right, it's intended for compactly learning to transfer between multiple domains, whereas you're only considering 2 domains.

- **Figure or Diagram: 10/10**

  Good.

- **Formal Description: 11/15**

  You don't need to use so much space describing methods that were covered in the course. You could give more explanation of what you did differently from these techniques.

- **Related Work and Bibliography: 15/15**

  Very good discussion of related work.

- **Comparison or Demonstration: 18/20**

  Very thorough exploration of the parameter space with a nice variety of metrics.

- **Limitations: 5/5**

- **Conclusions: 5/5**

- **Discretionary: 14/15**
